

The Best Slats For Your Hog Complex

Made from high quality precast concrete, Barkman hog slats offer exceptional value for your hog complex. Not only do Barkman concrete slats provide a cleaner, dryer and healthier environment for your animals, but they also provide a number of important advantages over conventional hog farm flooring including safer footing, improved sanitation and superior long term durability.

Barkman offers a wide selection of slat styles and sizes to meet the needs of your operation, all manufactured according to demanding specifications using the highest quality materials available. If you seek the best in concrete slats, you can't do better than Barkman.

Self-Cleaning Slots

All Barkman slats are designed to provide optimal material flow through for less hang-up and easier cleaning overall. The Filter Crete and dry sow slats feature a 4" thick box beam design with 2" thick inside slats. The difference in depth is more efficient for cleanout. The result is a healthier, more sanitary environment for your hogs.

Designed For Comfort And Reduced Injury

Barkman slats have been engineered to provide maximum comfort for hogs and feature more openings per square foot and narrower slot openings to prevent leg and hoof damage.

Semi-Dry Precast Concrete

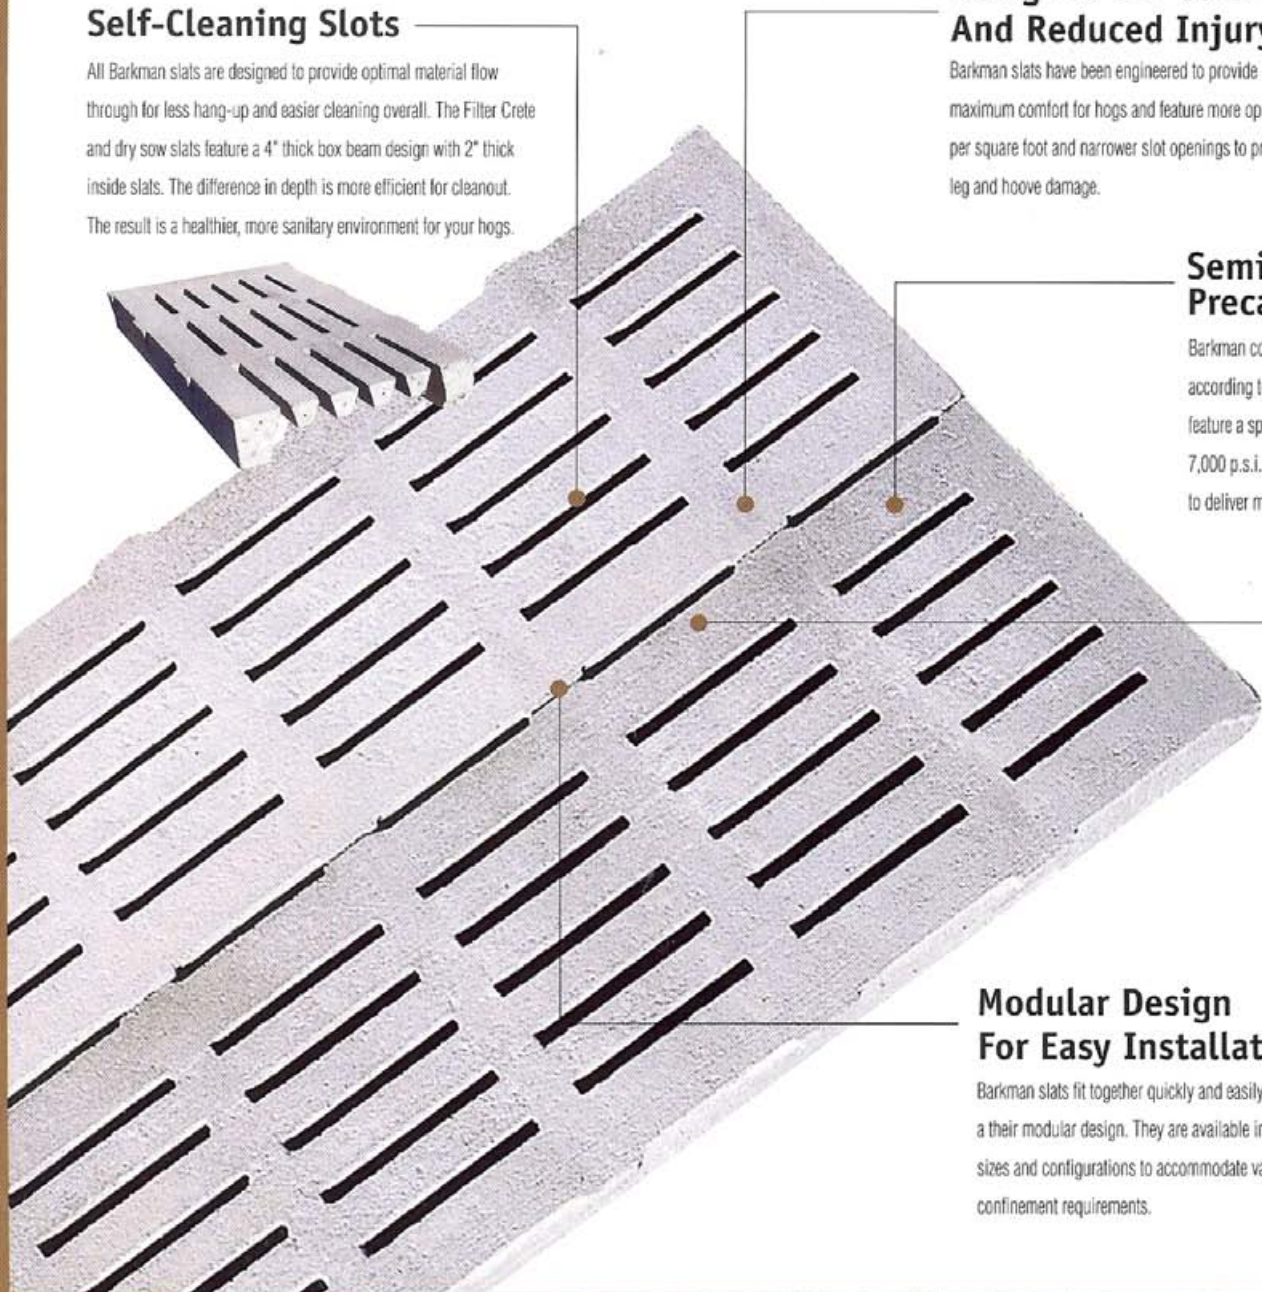

Barkman concrete slats are manufactured according to exacting specifications and feature a special semi-dry concrete 7,000 p.s.i. formulation that is designed to deliver maximum durability.

Extra Sure Footing

A textured finish to Barkman slats gives them a natural non-slip surface providing extra sure footing and minimal likelihood of injury to your hogs.

Modular Design For Easy Installation

Barkman slats fit together quickly and easily thanks to their modular design. They are available in a range of sizes and configurations to accommodate various hog confinement requirements.

Penning And Feeders

Pen Wall Sections

Barkman penning sections are available in a variety of sizes up to a maximum of 10' long and 42" high. Pen wall sections are available with cast in place nuts for bolting gate hinges or stainless steel angles cast into the top and bottom corners to allow welding to other panels and to the floor. Whatever your requirements, we can accommodate the need.

Solid and Slotted Penning

Available in either solid or slotted design, Barkman penning is virtually indestructible and will not deteriorate. Its modular design makes it easy to install and allows you to create pen sizes specific to your needs. The reinforced concrete panels are ideal for installation into both new and renovated barns. The specially slotted designed panels allow air movement between pens and, in breeding pens, contact between boars and sows.

Sow Trough

Barkman's sow trough is made in four foot sections, features rounded corners and is available with left or right ends.

Hog Feeders

Barkman's hog feeders are available in a single and a double feeder configuration (in 4, 6, 8 and 12 place sizes) with an inverted V trough that virtually eliminates stale feed. Available with either galvanized or stainless steel grates.

Sump Pump Pit

Barkman's 3', 4' and 5' inside diameter sump pump pits can accommodate either submersible or long shaft pumps. These units stack easily and are available with or without bottoms and with two piece concrete lids.
